

Project Improvements

The City has been championing the Route 47 Widening Project for many years, all the way from the preliminary engineering study and design phases to now as construction is soon to begin in 2026 and utility relocations are currently underway.

Due to the hard work and collaboration of the City's many partners, this project is so much more than pavement resurfacing! Additional proposed improvements include the following, which vary based on location:

-  Three roundabouts
-  Traffic signal and intersection improvements
-  Side road and turn lane reconstruction
-  Raised medians
-  Storm water drainage improvements
-  Water main and sanitary system improvements
-  Shared use path (east side)
-  Sidewalk improvements (west side)
-  Pavement marking and signage
-  Streetscape enhancements
-  Native plant landscaping
-  Retaining wall construction
